

README

Rok Bohinc

May 4, 2019

There are two scriptst to adress the assignment, “Download_file” and “run_analysis”. “Download_file” downloads the files and unzips it in the corresponding directories. “run_analysis” reads the downloaded files intp R, merges the train and test data sets, select the releveant columns and give them descriptive names. This data set is labeled “data”. “run_analysis” also calculate the mean of each column in the data set “data” and converts it into a tidy data set labeled “tidydata”.

Run first “Download_file” and then “run_analysis”.
